

Internet shop with React Redux and React Router

Task is to create an internet shop where you have at least 30 items taken from a separate file stored in an array. Each product should have an **add to cart** option with the ability to add several items. On page load you should show the first 9 items and, if one wants to see more, "Load more" action is required.

In the cart page (**/cart**) one should see a table of selected items. Each item should have the option to remove or increase the count.

Application needs to have at least two language versions which can be changed with select within header.
